SUMMARY

Data Science and Analytics student at NUS with experience analyzing large datasets, building dashboards, developing Python-based data pipelines, and AI related solutions.

EDUCATION

National University of Singapore

Aug 2022 – May 2026

Bachelor of Science (Hons)

- Major in Data Science and Analytics
- Relevant Coursework: Data Analysis and Visualization, Database Management, Probability, Regression Analysis, Natural Language Processing, Machine Learning

SKILLS

- **Programming & Analytics:** Python (Pandas, NumPy, Scikit-Learn, TensorFlow), R, SQL
- **Data Processing & AI:** ETL, Web Scraping, NLP, Machine Learning, RAG, AWS Bedrock
- **Cloud & DevOps:** AWS (S3, RDS, DynamoDB, ECS, Fargate), Git, Docker
- **Visualization & Reporting:** Power BI, Streamlit, Excel

EXPERIENCE

Data Analyst Intern | Keppel Ltd.

Jun – Dec 2025

- Built an automated Python-based scraper running hourly, collecting 100+ financial news articles weekly from 5 sources, reducing manual news review time for the investment team from 1 week to 1–2 days.
- Implemented retrieval-augmented analysis (RAG) using AWS Bedrock to enable efficient querying and interpretation of large text datasets.
- Designed a scalable AWS data architecture (S3, DynamoDB, RDS) to store and query structured and unstructured data efficiently.
- Designed analytics dashboards to monitor news ingestion performance, including hourly success/failure rates per source, total articles scraped per day, and content coverage trends.

Data Analysis Assistant | National University of Singapore

Jan – May 2025

- Built an interactive Power BI dashboard tracking 1000+ funding agreements, reducing manual reporting time by 50% and enabling real-time monitoring of allocation status.
- Analyzed funding allocation datasets using Python and Power Query to identify trends and anomalies supporting strategic planning for the Office of the Deputy President.
- Processed and standardized agreement data using Python to improve data quality and ensure consistency across reporting workflows.

Business Intelligence Analyst | Sony Electronics Singapore

May – Aug 2024

- Cleaned and transformed CrowdStrike cybersecurity datasets to prepare data for reporting and analysis.
- Developed Power BI dashboards transforming processed data into actionable insights for regional security operations teams.
- Implemented bilingual (English–Japanese) reporting workflows using Power BI Translation Builder, enabling automated dashboard localization for cross-regional teams.
- Designed a standardized identifier naming convention across reporting datasets, reducing reporting inconsistencies and improving cross-platform data integration.

PROJECTS

YouTube Analytics & Bias Detection Engine

Aug – Nov 2025

- Built an end-to-end web application analyzing YouTube watch history to identify viewing patterns, detect media bias and recommend balanced content using AI.
- Applied **Natural Language Processing (NLP) techniques** on video transcripts to classify ideological stance, emotional intensity, and topic categories; visualized insights via an interactive Streamlit dashboard.
- Integrated **GPT-4o** to generate neutral content recommendations, including alternative search queries and comparative explanations for bias mitigation.
